

FIBERGLASS AERIAL LIFT BUCKET & BOOM REPAIRS

VPC'S REPAIR SERVICES

Virtual Polymer Compounds (VPC) has been providing fiberglass aerial lift bucket and boom repair since 2007, repairing and restoring hundreds of units during that time. Our experienced fiberglass repair specialists have the expertise to offer both **structural repair** and the **cosmetic restoration** of damaged fiberglass aerial buckets.

VPC's trained laminators and fabricators will perform a **complete inspection** of the lift bucket and/or boom. For structural repairs, our laminators use at least 2 layers of 1.5 oz chopped strand mat, which insures that the completed repair is as strong as new, often times even stronger! The cosmetic restoration involves grinding, sanding and repair of cracks, fractures and scratches. In most cases, there is no need to replace damaged buckets or booms as VPC's repair team can safely fix cracks and nicks cost-effectively, potentially **saving you thousands of dollars**.

Take advantage of our **pick-up and delivery service**, or we can come to you and complete the repair at your location. Conveniently located on Route 104 in Medina, VPC can quickly and effectively service both the Buffalo and Rochester markets easily. Our repair and restoration service includes:

- ∴ free estimate
- ∴ pick-up and delivery
- ∴ a complete inspection
- ∴ interior and/or exterior repair
- ∴ interior and/or exterior gel-coat finish
- ∴ new hardware when necessary

A LITTLE BIT ABOUT WHO WE ARE...

VPC supplies **high quality fiberglass products**, such as shelters, flumes and manholes, to the industrial and municipal water and wastewater markets, as well as to government, commercial and residential customers. Our state-of-the-art technology has provided state-of-the-art solutions whenever chemical and environmental challenges must be met. Fiberglass products are an **economical and non-corrosive solution** for almost any application. Our sales and engineering staff work with our customers from project conception through installation to completion to ensure any customers' needs and expectations are met through every stage of their order.
